

First Aid and Infection Prevention and Control Procedure

POLICY and PROCEDURES

Cape Clear Primary School

Purpose

The purpose of this procedure is to identify first aid requirements and implement appropriate arrangements to ensure all injured persons are provided with immediate and adequate treatment of injury and illness at Department of Education and Training (the Department) workplaces.

Scope

This procedure will apply to all Department workplaces including central and regional offices and schools.

Procedure

This procedure should be read in conjunction with the SPAG – Student Health for guidance on students with specific medical conditions, infectious diseases (exclusion from school) and blood-borne viruses including hepatitis and HIV.

First Aid Risk Assessment

The **Workplace Manager** and/or **Management OHS Nominee** are to assess the first aid requirements of the workplace by completing a First Aid Risk Assessment in consultation with the Health and Safety Representative (HSR) and/or first aid officer(s). The assessment is to include:

- size and layout of the workplace premises
- high risk areas (Technology, Home Economics, Science)
- number of campuses
- the number of employees and students in the workplace
- the nature of hazards
- the previous accidents/incidents and injuries
- authorised after hours programs or shift work
- the nature and location of school excursions and camps
- Department/school leased/owned vehicles
- location of the site (i.e. proximity to medical facilities).

First Aid Officer Training

The **Workplace Manager** and/or **Management OHS Nominee** should ensure that **First Aid Officers** have completed recognised first aid training that meets the requirements of Provide First Aid - HLTAID003 and complete an annual refresher for Cardiopulmonary Resuscitation (CPR) - HLTAID001. First Aid Officer are to implement controls specified in the *Cleaning and Handling of Blood and Body Fluids Safe Work Procedure*.

Records of first aid training are to be kept and maintained as per the requirements of the *OHS Induction and Training Procedure*.

The Department's OHS Advisory Service can be contacted on **1300 074 715** for further information on first aid training.

First Aid Rooms/Sick Bays

Where schools and other Department workplaces have a first aid room, it should be located so as to be accessible to injured persons. It should be well-lit, ventilated and clearly identified with appropriate signage. Workplaces without a first aid room should provide a first aid area (sick bay) for ill or injured people to rest in. Sickbays should meet as many as possible of the minimum requirements for first aid rooms.

The *First Aid Summary Sheet* or *Emergency Management Contact Details Sheet* must be completed and should include the details of the current First Aid Officer(s) and be displayed in the First Aid room/Sickbay (in close proximity to First Aid Kits) and on the OHS Notice Board.

Minimum First Aid Room Requirements

The following items are minimum requirements when establishing a first aid room:

- Personal Protective Equipment (eye protection, gloves, apron/gown)
 - Resuscitation mask
 - Electric power points
 - Sharps disposal system
 - Biohazard Waste Container/ Sanitary Waste Bin
 - Work bench or dressing trolley
 - Storage cupboards
 - Sink (with hot and cold water)
 - First aid kit appropriate for the workplace
 - Blankets and pillows
 - An upright chair
 - Desk and telephone
 - List of emergency telephone numbers
 - *First Aid Summary Sheet* or *Emergency Management Contact Details Sheet* clearly displayed
 - Stretcher (If a need is identified using *First Aid Risk Assessment*)
-

First Aid Kits

The **Workplace Manager** and/or **Management OHS Nominee** are required to determine the appropriate contents of the workplace first aid kits in consultation with Health and Safety Representatives and employees. First aid kits should meet the first aid requirements of individual schools and other Department workplaces. This includes the number of first aid kits and their contents as identified in the *First Aid Risk Assessment*.

Regular inspections of first aid facilities, including a review of the first aid kits on site, are to be scheduled into the OHS Activities Calendar or equivalent template and conducted using the First Aid Kit Contents Checklist and or equivalent template. The **First Aid Officer** should also ensure that first aid kit contents are restocked within date, as required.

Automatic External Defibrillators

Automatic External Defibrillators (AED) are not normally required in first aid kits or first aid room supplies. Schools and other Department workplaces may determine that an AED be included as part of the first aid provision, particularly where the *First Aid Risk Assessment* indicates circumstances where life-threatening injuries could result and timely access to emergency services cannot be assured. Prospective AED operators should be trained in their correct use.

As a guide, refresher training is required every twelve months. AED function, batteries and pads should be checked monthly and after each use. Further information can be found in the 'Guidelines for the Purchase and Use of Automated External Defibrillators'.

Dispensing Medication

The **Workplace Manager** should ensure that a Medication Authority Form for all medication to be administered by the school has been obtained and checked to ensure it has been completed by a medical practitioner or by a parent/guardian, as agreed by the parent(s) and **Workplace Manager**. Employees may administer medication to students as required and as directed by the **Workplace Manager**. Analgesics, such as, aspirin and paracetamol are not to be stored or dispensed to students. Employees are responsible for carrying and dispensing their own medication (prescribed or over the counter).

Where medication is required in spontaneous situations, detailed administration instructions should be provided (e.g. asthma attacks). For further information, refer to SPAG – Student Health. A medication log or equivalent official medications register should be used by the person administering the medication.

Infection and Prevention Control

Adequate infection and prevention control **must** be practiced at all times when administering first aid or cleaning up blood or body fluids. The following infection control procedures must **always** be adhered to:

- cover cuts and abrasions with waterproof occlusive dressing to avoid contamination of cuts/abrasions with another person's blood and/or body fluids
 - wear protective gloves when in contact with body fluids, non-intact skin and mucous membranes
 - wear a mask, eye protection and a gown where there is a risk of splashing blood or other body fluids
 - remove any broken glass or sharp material with forceps or tongs and place in sharps container
 - wash hands thoroughly after direct contact with injured person or blood/body fluids with warm soapy water, rinse, dry and sanitise hands using an alcohol-based rub or gel.
-

Cleaning and Sanitising

Where a blood/biological spill has occurred the following must be adhered to:

- isolate the area where the incident occurred
- clean up blood and other body fluids spills with disposable paper towels/tissues or by using a Biohazard Spill Kit
- use hospital grade disinfectant (use 5ml of bleach to 500ml of water) to sanitise the area

- dry the area with disposable paper towels/tissues after clean-up (as wet areas attract contaminants)
 - where a spill occurs on carpet, shampoo as soon as possible. Do not use disinfectant. Steam cleaning may be used instead
 - Items such as scissors and tweezers are to be cleaned and disinfected/sterilized after use.
-

Disposal of Contaminated Waste

Contaminated waste (e.g. dressings, wipes, cleaning cloths, nappies, human tissue, and blood and laboratory waste) should be disposed of in:

- appropriate biohazard waste containers/bags; or
- in the general waste in suitably labelled bags (bags are to be double bagged); or
- Sanitary Waste Bins.

Sharps should be disposed of in a sharps container. All sharps containers must be compliant with AS 4031: Non reusable containers for the collection of sharps medical items used in health care areas.

Recording the Administration of First aid Treatment and Incidents

When first aid treatment has been administered to an employee the incident is to be reported onto *eduSafe*. When first aid has been administered to a student the incident is to be reported onto CASES21. All incidents reported as a result of suspected/actual infection should be investigated using the *Hazard and Incident Investigation Template*. When relevant, counselling should be offered to affected employees through the Department's Employee Assistance Program by calling **1300 361 008**.

Medical Information and Confidentiality

Department schools and workplaces should ensure privacy of information is maintained as per the *SPAG – Information Privacy*.

Hepatitis

Further controls specifically related to hepatitis can be found in *Guidelines for Hepatitis*.

Asthma

Controls specifically related asthma can be found in the *SPAG - Asthma*.

Allergic Reactions

Controls specifically related allergic reactions can be found in the *SPAG - Student Health-Anaphylaxis*.

Defined terms

Terms defined within this Procedure can be located on the Department's *Defined Health and Safety Terms website*. Defined roles will appear **in bold**.

Checklist

Tasks/Actions	Completed ✓
First Aid Risk Assessment has been conducted	
A First Aid Summary Sheet has been displayed in the First Aid Room, near First Aid Kits and on the OHS Notice Board	
Minimum First Aid Room requirements have been met, see section 3.3.1	
First Aid Kits have been stocked and inspected and are within date
